

ICGA Chemotherapy-Stratified NetITH Survival Analysis

A) NetITH HR by Treatment Status vs Untreated HR

B) NetITH Distribution by Treatment Status

Chemotherapy-Stratified NetITH Analysis

All patients: HR = 0.914
Treated: HR = 0.845
Untreated: HR = 1.002
Interaction $p = 0.5363$

Interpretation:
No significant treatment interaction
NetITH survival effect is similar
regardless of chemotherapy status.
This supports the immune-mediated
mechanism over chemosensitivity.
